ABRITES Commander for Mitsubishi is a software intended for standard diagnostics and key programming for Mitsubishi vehicles.

Standard Diagnostic Functions:

For all electronic control units reading identification data

For all electronic control units read/clear fault codes (DTCs)

DTCs description is available in different languages

Device scan

Data Display / Measured values

Coding/Adaptations

Output tests

Read/Program flash Engine Control Units

Output tests

Special functions:

Key programming

Dump tool

The key programming function currently works by CAN. Please, see below the supported vehicles. In the next versions we will add more vehicles to this list FREE for all customers who own the key learning function. We also plan to support vehicles with KLine interface.

Keys can be programmed when the pin code of the vehicle is known. The Mitsubishi Commander has a database of default pin codes. The pin code can be changed with the Mitsubishi Commander. If the pin code is changed - next time when a key is programmed the new pin code should be entered.

The Mitsubishi commander software supports all CAN vehicles for key programming by OBDII

L200 (2006-2011)

L200 Hunter (2011+)

Mitsubishi 380 (2006-2009)
Mitsubishi Challenger (2009-2012)
Hunter (2007-2011)
Pajero (2006-2011)
Grandis (2006-2011)
